## EARTH/CLIMATE

climate change impact mitigation, renewable energy, agritech and water

**High-Throughput safety screening of molecular targets for plant protection products:** A screening process allows for the identification of chemical substances in plant protection products in order to inform all members of the value chain.

**GAIA - Green Area Integrated Aid:** The project proposes a scalable approach for analyzing urban green space data and its management, optimizing its impact on air quality.

**Weather 4 Energy:** The central role of weather forecasts in informing the energy sector and, more broadly, the infrastructure system is far from ideal in terms of its qualitative and quantitative interpretation of downstream impacts.

**The AI LAM - limited-scale AI weather prediction model:** A tool to estimate and predict the phenomenon of soil erosion caused by rainfall.

**HaMMon - Hazard mapping and vulnerability Monitoring:** Optimizing environmental risk management with Artificial Intelligence.

**SowStain - Digital Twins for precision agriculture:** A Digital Twin will be developed to study and optimize processes in precision agriculture.

**E3CIndex - European Extreme Events Climate Index:** An index to assess, understand, and simulate the impact of extreme weather conditions.

## EARTH/CLIMATE

Climate change impact, renewable energy, agritech and water

**AI-CGM - The AI General Circulation Model:** Machine learning as a tool to innovate weather forecasting systems.

**E.T. COMPLEX Digital Eco Twin platform for Zero Km Carbon Neutrality of complex systems:** Develop an advanced Digital Twin platform based on the urban system represented by the buildings of the CNR Tecnopolo in Bologna and its green areas.

**SEEDS - Soil Erosion Evaluation through Data-driven Solutions:** A tool to estimate and predict soil erosion caused by rainfall.

**Decision Support System for optimal water management:** A tool for planning the use of raw water supply sources based on availability.

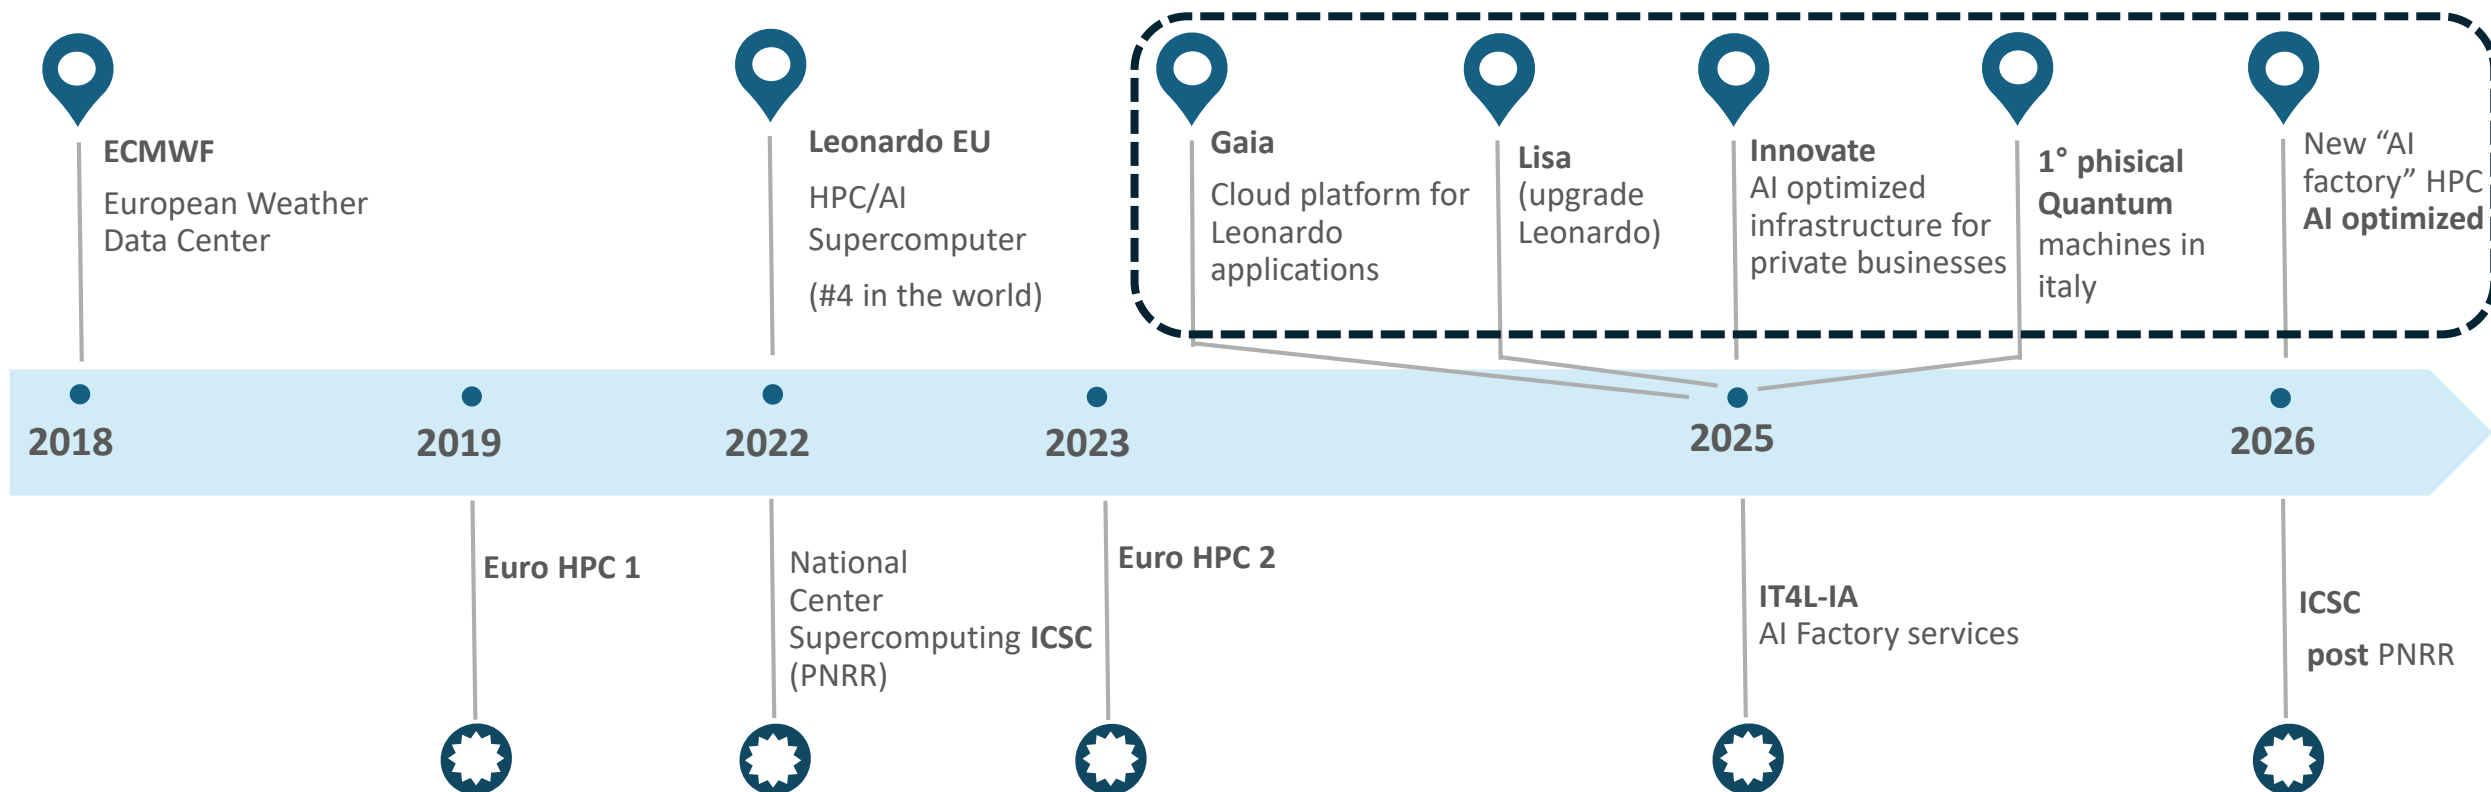

**Microclimate digital twin in agrivoltaic system:** Create a digital twin of an agrivoltaic plant to improve its internal climatic conditions.

**Forestry Analyzer:** to combat deforestation, this tool provides accurate measurements of emissions resulting from deforestation and forest degradation.

**Tornatura:** developing an application to support farmers in managing phytosanitary emergencies.

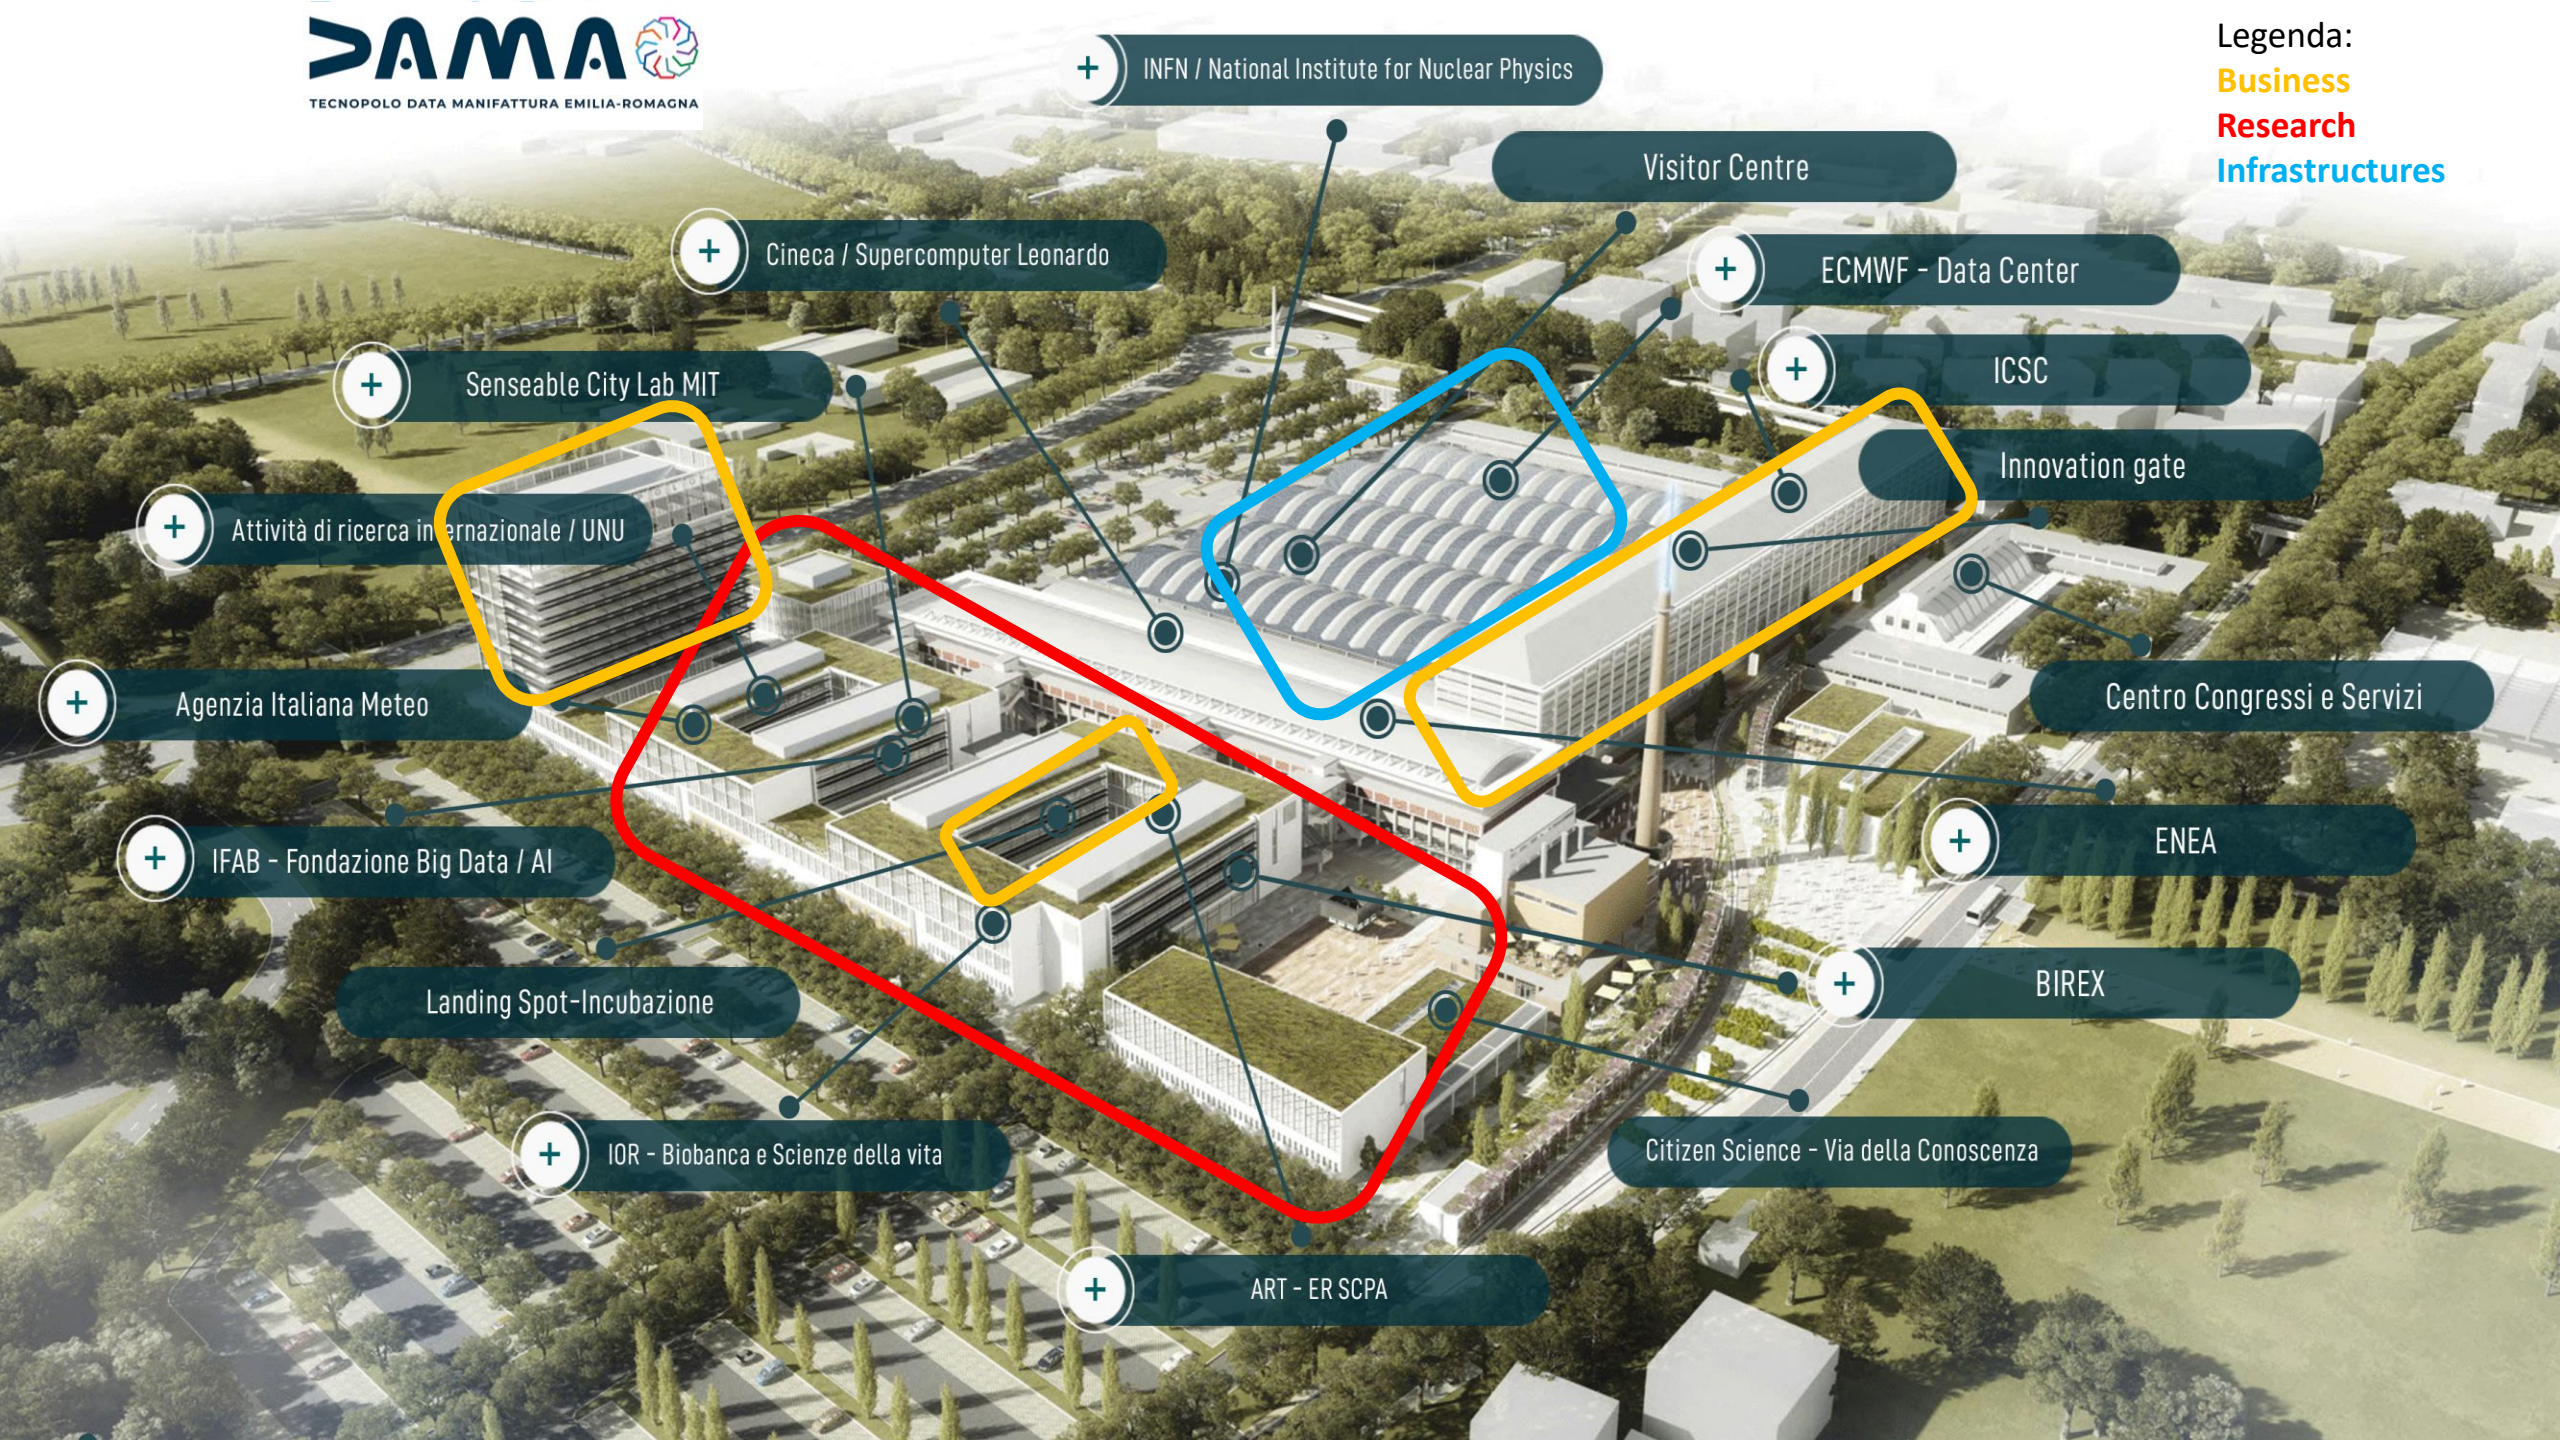

### Computing Infrastructure

### Key programs

+ INFN / National Institute for Nuclear Physics

+ Cineca / Supercomputer Leonardo

+ Senseable City Lab MIT

+ Attività di ricerca internazionale / UNU

+ Agenzia Italiana Meteo

+ IFAB - Fondazione Big Data / AI

Landing Spot-Incubazione

+ IOR - Biobanca e Scienze della vita

+ ART - ER SCPA

Visitor Centre

+ ECMWF - Data Center

+ ICSC

Innovation gate

Centro Congressi e Servizi

+ ENEA

+ BIREX

Citizen Science - Via della Conoscenza
